Abstract (en)
[origin: CA2720195A1] The invention relates to a device for producing concrete blocks, particularly paving stones, building blocks or the like, comprising a storage container (7) forming a receiving chamber (S) for a plurality of layers (9, 10, 11, 12 and 13) of concrete in different colors. Dispensing means (19) are provided, in order to dispense partial amounts of the layers from the receiving chamber (8) such that a release device (15) connected downstream thereof receives a mixture of the layers of concrete in different colors. At least a partial section of a side wall (17) of the receiving chamber (8) is provided with at least one dispensing opening (18) for dispensing a partial amount of the layers. The size of the passage of the dispensing opening (18) can be varied by the dispensing means (19).
