Abstract (en)

[origin: CA2709761A1] The present invention provides a process and a device (3...6) for dewatering a hydraulic fluid of a hydraulic system (2), in particular in the aerospace sector, having a container (10) which has a sorption medium, a feed (11) which feeds the hydraulic fluid from the hydraulic system (2) to the container (10) for passing the hydraulic fluid through the sorption medium (46) for dewatering the hydraulic fluid in a dewatering mode of the device (3...6) and a return (12) which recirculates the dewatered hydraulic fluid from the container (10) to the hydraulic system (2) in the dewatering mode of the device (3...6). By means of the process and device (3...6) according to the invention, the hydraulic liquid can be dewatered continuously and very swiftly.
