Abstract (en)  
[origin: EP2085833A1] The movement (1) has base and finishing modules (2, 15) provided with a barrel (4) and center wheel, respectively. The barrel and the wheel are rotatably mounted on frames of the respective modules, and kinematically connected with each other. Screws are associated to the frames for fixing the modules. Orifices (30) are formed concentric to the barrel and permit relative positioning of the modules in different angular positions with reference to a rotation axis of the barrel.
