Abstract (en)

[origin: WO2009098307A1] The invention relates to a timepiece including a movement that comprises: a power source; a means for displaying the current time; a chronograph mechanism including a control mobile (60) comprising at least one control member for activating the start, stop and reset functions of the chronograph. According to the invention, the control mobile (60) further includes a driving member comprising a toothed sector (84) kinematically connected to the control member. The timepiece further includes a button that can be rotated, said button being rigidly connected by teeth that can be kinematically connected to said toothed sector so that the pivoting of said button activates the start, stop and reset functions of the chronograph.
