Abstract (en)

[origin: US2009197681A1] Systems, methods and computer readable media are disclosed for targeting a recommendation to a first user of an online multi-player gaming environment based on tracked data of a second user with which the first user has a relationship on the online multi-player gaming environment. In addition to the general system, methods and computer readable medium for such recommendations, the recommendations can be further refined by incorporating information about the first user, including how the user accesses the online multi-player gaming environment.
