Abstract (en)

[origin: EP2239025A1] The lining (10) has an upper layer (12) made of elastic material, and a lower layer (14) arranged at a lower side of the upper layer. The lower layer includes a core area (26) with a knitted fabric made of filaments (40) that are partially and material-fittingly connected with each other. Fibrous material layers (28, 30) made of fleece or fabric material are provided at an upper side and/or a lower side of the core area. A fibrous material is formed with polycondensation fibers and polyamide coated polyester fibers. The upper layer is produced with polyurethane bound rubber granules. An independent claim is also included for a method for manufacturing an impact absorbing floor construction.
