Abstract (en)

[origin: EP2239356A1] The machine (1) has conveyor belts (8, 9) moved parallel to an axis of a warping drum (2) and arranged at a circumference of the warping drum. A thread guiding device (17) is provided with a thread guide (18) at a front side of the warping drum. A drive device produces relative motion between the thread guide and the warping drum in circumferential direction. Another thread guiding device (19) is provided with a thread guide (20) at another front side of the warping drum. The conveyor belts are divided into two sections. An independent claim is also included for a method for operating a sample warping machine.
