Abstract (en)
[origin: EP2239359A1] The product has a core, and a cover braid surrounding the core, where the core and the cover braid are interconnected by individual linkages. The product is formed from individual threads. The linkages have thread changes, which are formed between the threads of the cover braid and the threads of the core. The linkages have thread interloops, which are formed between the threads of the cover braid and the threads of the core. A core braid is formed with the threads of the core. The individual threads of the cover braid have different colors. Curved tracks form a cover braid ring (1). Independent claims are also included for the following: (1) a method for machine production of a braided product from individual threads (2) a device for production of the braided product.
