Abstract (en)  
[origin: EP2239375A2] The invention relates to a restraining safety barrier for roads which comprises a symmetrical profile formed by two end edges in a quasi-isosceles triangle bend (2) which are open at their base aimed towards the back of the restraining safety barrier (1), the bends (2) being joined by a receiving central planar web (3) and each of them having towards the front of the restraining safety barrier (1) a rounded vertex (2D) of first contact with a certain radius (2E) and in which there converge a directing side (2A) facing towards the receiving central planar web (3) and a smaller side (2B) which at its end forms a folded edge aimed towards the back of the actual restraining safety barrier.
