Abstract (en)
[origin: EP2239387A2] The element (9) has an adjustable fastening element (10) protruded at the element for attachment on concrete constructions of different wall thicknesses. The fastening element is lockable in different length positions. Sheet metal plates are protruded at the element, and have detent brackets, below which a holding element provided with locking slots is insertable and fixable in different holding positions. The detent brackets are pressed into the locking slots. The seal element is provided at corner area of a concrete wall. The concrete construction is designed as construction of basement walls.
