Abstract (en)

[origin: EP2239392A2] The clamp (1) has a bracket (4) with a hook region, which is aligned with two ends towards a connecting rod. The hook region forms an elongate installation edge for installation at a lower side of a roof cover plate, where the edge corresponds to breadth of the bracket. The hook region is subdivided into hook elements (10-12) by a slot (9), which is opened towards free hook ends and is aligned parallel to margin edges of the bracket. The slot runs over entire length of the hook region and over a length of the bracket up to the rod. The clamp is made of a sheet metal strip.
