Abstract (en)
[origin: WO2009095028A1] The present invention refers to an ointment comprising vitamin E in particular alpha- tocopherol and a protein-free haemodialysate, chemically and biologically standardized - from the blood of healthy young calves. It stimulates cellular oxygen consumption, stimulates ATP synthesis, and accelerates regeneration in reversible cell and prevents tissue damage as well as promotes revascularization of ischemic tissue, promote collagen synthesis and growth of new granulation tissue, and accelerates revitalization. As carrier the ointment contains vaseline (70%) in oily solution. Low concentrated ointment have the ability to revitalize the skin and decrease wrinkles. The high concentrated ointment have the ability to stimulate hair growth and promote healing of persisting ulcers.
