Abstract (en)

[origin: WO2009098141A1] Termally-activated and -hardenable adhesive foil, especially for adhesion of electronic components and flexible printed circuit paths consisting of an adhesive material which is composed of at least a) one chemically crosslinked or at least partially crosslinked polyurethane, b) one at least bifunctional epoxy resin, c) one hardener for the epoxy resin, wherein the epoxy groups react chemically with the hardener at high temperatures, characterized in that at least one of the starting materials of the polyurethane is a hydroxyl-functionalized polycarbonate and at least one of the starting materials of the polyurethane has a functionality greater than two.
