Abstract (en)

[origin: WO2009090260A2] The invention relates to an improved relatively economical process and a corresponding device for producing bioethanol from cereal and lignocellulose-containing biomasses in which a production line for cereal and a production line, operated simultaneously, for lignocellulose are operated as far as the saccharification stage and a specific fermentation, depending on the biomass used, and then the material streams are fed to a combined distillation and dewatering stage.
