Abstract (en)
[origin: WO2009077325A3] The invention relates to a refrigerating machine housing (1), comprising an inner container (3) defining a cooled space, said inner container being provided on the outside with an insulating material layer (2), and having a bearing formed on the side walls (32) thereof for a lid (6) that is pivotally supported at the inner container (3) by means of bearing elements (52), wherein the bearing element (52) is provided at a backing piece (5) located on the insulating material side, said backing piece being located on at least one of the side walls (32) and penetrating the side wall (32) in an opening (42).
