Abstract (en)

[origin: WO2009083038A1] An access element (10, 60) for a refrigerating storing device (1) comprises a panel (11, 61) adapted for forming a surface part of the access element (10, 60), an extrusion profile (12, 62) arranged at least partially around the panel (11, 61) and engaging the panel on at least a circumferential portion (13, 63) thereof, and a seamless edge (15, 65) arranged at least partially on the extrusion profile (12, 62), the seamless edge being formed from plastic material. The seamless edge increases the stiffness and robustness of a front surface for correspondingly formed access members.
