Abstract (en)

[origin: WO2009097975A1] The invention relates to a method for identifying and authenticating an object. Said method is characterized in that the object comprises an identifier which has a code zone and a dispersion zone that is irradiated with electromagnetic radiation for authentication and/or identification purposes in such a way that the electromagnetic radiation reflected by the code zone is used for identifying the object and the electromagnetic radiation reflected by the dispersion zone is used for authentication purposes. The invention further relates to a device for identifying and authenticating an object in parallel.
