Abstract (en)
[origin: WO2009097981A1] The invention relates to an installation switch device with a housing of insulating material of a shell construction, with a front and a mounting side and a narrow and a broad side connecting the front and mounting sides, comprising a first and a second housing shell held together by connector means with formation of a joint line running parallel to the circumferential contour of the broad side of the housing. The connector means are exclusively clipping connectors.
