Abstract (en)

[origin: EP2241411A1] The tool has a body and a handle, which partially constitute a tool casing. Motor units drive a screwing, drilling or grinding member around a rotation axle i.e. screwing axle (Z). Obtaining unit (4) obtains a parameter of movement of the casing and includes a determination unit to determine an angular displacement of the casing around the axle or an axle parallel to the rotation axle. A measurement unit (44) measures the angular displacement of rotative terminal body relative to the casing. A calculation unit (45) adds the angular displacement of the body and the displacement of the casing.
