Abstract (en)

[origin: EP2241710A2] The system has a bracket including branches (8, 9), and a frame (1) turned towards a space (11). One of the branches is fitted in a column or a cross-piece (5) on a top of a plane or an intermediate plane, so that a part of the branch does not exceed beyond the plane in the space. The branches are connected to another column (4) or the crosspiece so as to form a projecting member (13) beyond the plane. The branches form a positioning body (14) co-operating with the frame to position the frame on a rigid construction structure (3) in a construction plane (Pc).
