Abstract (en)

Mechanism for sliding a container (1) in an inner chamber, comprising a front door (3), two rails (4) fixed on the two sides of the inner chamber, two guides (5) that slide along the rails (4), and at least one connecting piece (6). Said piece (6) comprises a first connecting member (6a) to connect said piece (6) to the front door (3), a second connecting member (6b) to connect said piece (6) to the guide (5) and a third connecting member (6c) to fix said piece (6) to the container (1). Each guide (5) comprises a flange (7) on the top part of the end closest to the front door (3). The second connecting member (6b) of the piece (6) is pre-fixed to the guide (5) by means of said flange ('7) and is then fixed by binding said piece (6) against the guide (5).
