Abstract (en)
[origin: EP2241945A2] The mechanism has a second hammer (21) and a minute hammer (6) respectively cooperating with second and minute heart-pieces (3, 5). A connecting member (29) connects the minute hammer with the second hammer while allowing the hammers to move angularly relative to each other at a predetermined value. A minute counter jumper (34) is pivoted on a support (35) moved concentrically to a minute counter wheel (4). A screw (36) immobilizes the support in a desired zero reset position.
