Abstract (en)
[origin: WO2009100711A2] The invention relates to a device (1) for fastening a transport container (2) with a peripheral container frame (4) in an opening (10) of a vehicle wall (11) extending transversely to the driving direction (F), said wall separating a front passenger compartment (6) from a rear cargo compartment (8), wherein the container frame (4) is supported on an opening frame (5) and is disposed behind the opening frame (5) with respect to the driving direction (F). In order to ensure particularly torsionally rigid, high-strength, and secure support in the vehicle, it is proposed according to the invention that the container frame (4) has an H-shaped cross-section, wherein the two bars of the H run in the driving direction (F). The invention is particularly suited for fastening a ski bag (3) in a passenger car.
