Abstract (en)
[origin: WO2010000339A1] The invention relates to a circuit configuration (1) having a power input (2) and at least one power supply (3A, 3B) for generating a DC voltage for operating an electronic device. The circuit configuration (1) is characterized by a power input circuit connected between the power input (2) and the at least one power supply (3A, 3B) for selectably disconnecting or rectifying AC voltage provided via the power input (2) for the at least one power supply (3A, 3B). The invention further relates to a method of work for actuating such a power input circuit (4).
