Abstract (en)
[origin: EP2243551A2] The cabinet i.e. safety-under table cabinet (3), has a door (5) e.g. swing door, hinged at a cabinet body (4). An inner lining (6) is independent of the body and entirely or partially covers inside of the body. The lining is designed to be partially self-supporting and to be resistant against acid and lye. A floor lining part (6a), a roof lining part (6b) and a wall lining part (6c) of the lining are partially fixed against each other and/or provided on each other. The lining parts form a self-supporting cover independent of the body. A fitted element is provided inside the lining.
