Abstract (en)

[origin: EP2243734A1] To change the movement path of printed sheets (3), suspended at one edge (6) by clips (4) of a conveyor (5) along an initial path (2), they pass around a deflection section (11) for the opposite sheet edges (76) to be gripped by clips (14) of a second conveyor (15). The two conveyors are synchronized. At the deflection section, the printed sheets are presented to the second set of clips by a transfer unit (12).
