Abstract (en)
[origin: EP2243894A2] The awning has a drop profile placed at an outer articulated arm and holds a drop-side end of an awning cloth. Two side frames (6) are pivotably mounted at consoles (1) between a swiveled retracted position and a downwardly sloped extension position. A driver device (16) is attached to a cloth shaft (4). The driver device is brought into contact with a pivoting assembly from the frames, an inner articulated arm (7), the outer articulated arm and the profile before reaching the retracted position to transfer the pivoting assembly to the retracted position and to hold against weight force.
