Abstract (en)  
This invention relates to a profiled strip comprising a viewing side (2A) provided with a visible band (3) extending below the face of the viewing side substantially parallel to the face of the profiled strip (1), the profiled strip further comprising a lip which protrudes from the elongate face and forms part of the visible band, as a result of which no differing visual effects occur at the level of the connecting seam when two profiles are not perfectly joined together. The profiled strip according to the invention also allows the width of the elongate (longitudinal) connecting seam to be set.
