Abstract (en)

[origin: WO2009104953A1] The invention provides a cleaning concentrate supply device (1), comprising a receptacle (2) for cleaning concentrate (3), provided with a concentrate discharge (15) and a container having an opening to dispose thereon, in a replaceable manner, a block- shaped cleaning agent (5), as well as a liquid supply (6) for a washing out action, wherein liquid is sprayed onto the cleaning agent in order to wash out the cleaning agent and thus to form a cleaning.concentrate, wherein a valve (16) is provided in the concentrate discharge, which valve remains closed during the washing out action, characterized in that the device further comprises a signal supplier for giving a warning signal after a predetermined phase of the washing out action, in particular if the washing out has been completed. By providing such a signal supplier, the user is offered the possibility of disposing in time new cleaning agent. In particular the offered flexibility is a great advantage, because the signal already warns the user that replacement can take place a long time before the amount of concentrate formed has been consumed.
