Abstract (en)

[origin: WO2009103512A1] The invention relates to a method and an apparatus for the at least partial removal of a coating from a functional area (34, 50, 51) of a vehicle wheel (18) formed by a recess, a cap seat or a hub ring and relates to a surface treatment installation with an application device for applying a coating to a vehicle wheel (18) and a dryer for hardening the coating applied. According to the invention, it is provided that the functional area (34, 50, 51) is exposed to a beam produced by a source of radiation (12, 212) until the coating is at least partially transformed into a gas mixture in the region of the functional area (34, 50, 51) as a result of the heating by the beam. The apparatus according to the invention for the at least partial removal of a coating from a functional area (34, 50, 51) formed by a recess, a cap seat or a hub ring may be integrated in a surface treatment installation.
