Abstract (en)

[origin: WO2009103373A1] The invention relates to a method and a controller for controlling safety means for a vehicle, wherein at least one sensor signal is provided by an accident sensor. A characteristic is derived from said at least one sensor signal, and a flatness is determined from said first characteristic relative to at least one second characteristic. The crash type is then determined as a function of said flatness. The safety means is then controlled as a function of said crash type.
