Abstract (en)
[origin: WO2009103571A2] A fitting (4) for fixing a lightweight building board (1), which comprises two cover boards (5) and an interposed honeycomb structure, on a second lightweight building board running perpendicular thereto, a wall, a fixed wall plate (2), or the like, has a housing (7), which can be inserted flush between the cover boards (5) of the lightweight building board (1) and has channels (10a, 13a) for distributing glue. The channels (10a, 13a) open both into at least one externally accessible filling opening (10) and into the area adjoining the cover boards (5) of the lightweight building board (1). Such a fitting (4) can be fixed tightly and in a high-strength manner in a lightweight building board by gluing on the inner sides of the mutually opposing cover board (5).
