Abstract (en)  
[origin: WO2009099390A1] The present invention relates to a solar energy system comprising a space (1) in the roof or wall of a building, in which space a flowing medium may be circulated between an inlet opening (7) and an outlet opening (8). According to the invention several beams (9-13) are arranged in the flowing path of the medium between the inlet opening (7) and the outlet opening (8), which beams are permeable for the medium to allow flow of the medium between the inlet opening and the outlet opening.
