Abstract (en)
[origin: CA2715806A1] The invention relates to an explosive projectile (1, 1') and to a method for producing the latter, said projectile comprising a projectile shell (2). The aim of the invention is to reduce the risk of an unintentional detonation of the explosive (6) upon launching. To achieve this, the invention proposes a liquid explosive as the explosive (6), said liquid explosive not hardening and remaining in liquid form after being introduced into the interior (5) of the projectile shell (2). The explosive (6) is sealed in an airtight manner in an elastic casing (7) in the interior (5) of the projectile shell (2).
