Abstract (en)

[origin: EP2073510A1] The method involves automatically detecting the modification of parameters to be monitored e.g. accessory list (5), software application list (8) or data reference (9), of an electronic communicating device i.e. portable telephone (2), by another electronic communicating device i.e. smart card (1). The telephone is analyzed for identifying occurred modifications of the parameters. Predefined decision-making rules (11) are applied with respect to the analysis of the telephone. Development of an electronic directory (3) is scheduled. An independent claim is also included for an electronic communicating device for developing an electronic directory, comprising a detecting unit.
