Abstract (en)
[origin: WO2009112771A1] The invention relates to a multimedia content receiver/decoder (RD) that receives data representing the multimedia content as well as interference data associated with the content. Said receiver/decoder processes the data representing the content based on the associated interference data locally stored in the same, and transmits the multimedia content to a display means (SV) for displaying with an interference defined by the interference data at an interference level based on local interference legislation.
