Abstract (en)
[origin: EP2246480A2] The pile (1) has multiple cross section segments (3) provided in a cross section plane that is oriented to a pile longitudinal direction (L). The cross section segments are oriented in the cross section plane in different directions. The pile is made of aluminum and/or aluminum alloy. Each cross section segment has an undercut i.e. T-profile-like undercut groove (4), that extends parallel to the pile longitudinal direction continuously along the entire length of the pile. An aid e.g. handle, is attached to the groove by an inserting screw. An independent claim is also included for a chamber plate comprising two chamber walls.
