Abstract (en)

[origin: EP2246622A2] The arrangement has a ventilation slot (1) fixed to a standpipe (2). A roof tray (4) is provided with a circular opening (11), and a pipe sleeve (3) is formed as an elastic bellows for connecting the standpipe with the roof tray in a sealed manner. The pipe sleeve is provided with a circular shaped edge section (10) on a lower side, where the edge section extends in a radial direction. The circular opening has a diameter that is smaller than an outer diameter of the circular shaped edge section. The pipe sleeve is formed from rubber or ethylene propylene diene monomer.
