Abstract (en)
[origin: WO2009112688A2] Epilator comprising a casing intended to be held in the hand, comprising means of epilation by pulling the hairs out of the skin and means of driving the means of epilation comprising a first electric motor (10), and a blower (20) driven by a second electric motor (14) to create an airflow between an inlet opening (22) of the casing and an outlet opening (32) of the casing. According to the invention, the output shaft of the second electric motor (14) is angularly offset with respect to the output shaft of the first electric motor (10).
