Abstract (en)

[origin: WO2009066333A1] A furnishing structure modularly and unlimitedly composable in different and variable forms for different purposes, is composed of a plurality of basic rectangular frame modules (1) with a radiused or chamfered corners and having front and rear surfaces flat and parallel to each other and to the plane of the frame and at least two uniformly spaced holes (2) on each side of the frame with parallel axes orthogonal to the plane of the frame; rectilinear spacing listels (3) of cross section identical to the cross section of the sides of said rectangular frame modules, interposable between one or more sides of two rectangular frame modules and having at least two holes coordinately alignable to the holes present along each side of said rectangular frame modules; fastening means (4) introduced in aligned holes of two or more basic modules and spacing listels eventually interposed between basic modules. Various exemplary embodiments of differently structured modules and listels and of different fastening means are illustrated.
