Abstract (en)
[origin: WO2009106771A2] The invention relates to a device and a method for mounting and connecting at least one sanitary equipment pipe provided behind a wall, and to a corresponding method. The device includes at least one member for connection to a rear portion to be connected to a free end of the pipe, and a front portion including means for connection to another member of the sanitary equipment, provided in front of the wall, and at least one housing having an open face through which a connection member (3) can be inserted and an opening for the passage of a free end of the pipe, characterised in that said housing (1, 2) further has an open face (12) through which a connection member can be inserted, said housing being adapted to be inserted in a passage (6) formed through said wall (4) from the front of said wall and having means (18) for attaching the same against the front face (41) of said wall (4).
