Abstract (en)
[origin: WO2009103861A1] The invention relates to a mobile casing device, in particular for a hanging ceiling, that comprises: a casing (4) comprising a so-called inner frame at the base of which a stretched web (12) is attached, a casing housing (2) comprising a so-called outer frame and a bottom (8), to be attached to a wall; and a hinge assembly (28) connecting the casing (4) and the casing housing (2) in order to enable the tilting of the casing relative to the casing housing. The device is characterised in that the hinge assembly includes a first portion mounted on a surface of the inner frame opposite the bottom and a second portion mounted on the bottom, the first and second portions being mounted so as to be capable of rotation relative to each other, and in that one of the two portions of the hinge assembly is mounted so as to be capable of sliding movement.
