Abstract (en)

[origin: WO2009104098A1] The invention relates to a device for exchanging documents between two parties through a network that includes: an interface (13) arranged for receiving transmitter document data (16) from a network and including at least one transmitter identifier and one addressee identifier, a converter (15) capable of converting the transmitter document data (16) into intermediate document data (18) on the basis of a transmitter model associated with the transmitter identifier of the transmitter document data (16) while preserving the transmitter identifier and the addressee identifier, a generator (20) capable of converting the intermediate document data (18) into addressee document data (22) on the basis of an addressee model associated with the addressee identifier of the intermediate document data (18) on the one hand, and into archive document data (24) on the other hand, and a controller (14) arranged for calling the converter (15) with transmitter document data (16) received by the interface, for calling the generator (20) with the resulting intermediate document data, and for storing the resulting archive document data for further access by the transmitter or the addressee.
