Abstract (en)
[origin: WO2009107149A1] An adjusting drum (1) is described, in particular for adjusting a rotation of a delivering spiral of a product dispatching machine, comprising at least one first plate (3) equipped with first fastening means (5) to at least one product-delivering spiral, and at least one second plate (7) equipped with second fastening means (9) to at least one actuating system, between the first plate (3) and the second plate (7) axial orienting means (13) of the spiral being arranged, such axial orienting means (13) allowing a unilateral rotation of the first plate (3) with respect to the second plate (7).
