Abstract (en)
[origin: EP2248447A1] The device has a repository (2) and a removal compartment (3) which are separated from each other by a barrier wall (4). Two handles (5a, 5b) are provided for feeding food products from the repository into the removal compartment. The barrier wall has a contact surface (9) at a side of the removal compartment, where the contact surface is arranged above a base surface of the removal compartment. The contact surface has overall length adapted to the width of the barrier wall, where the contact surface is attached to the barrier wall below a barrier-vertical portion (6).
