Abstract (en)
[origin: EP2248448A1] The device has a storage cupboard (4) and a withdrawal compartment (5) separated with each other by a separating wall (6). The separating wall for separation of the food products consists of tiltable locking handles of different lengths. The locking handles are formed as a long locking handle (8) and a short locking handle (7). A connecting device is formed as connecting bar (12), which couples two opposite lying side panels of a housing (1) with each other. The locking handles are implemented as one-piece wire handles.
