Abstract (en)
[origin: EP2248456A2] The device has an absorber chamber (5) arranged in an absorber area (53). Each absorber sections (531-534) comprises inlet surfaces (5311, 5321, 5331, 5341) for inlet of process air (8) and discharge surfaces (5312, 5322, 5332, 5342) for discharge of the process air. Inlet channels (541-543) border at one of inlet surfaces, and outlet channels (544, 545) border at one of discharge surfaces. The inlet and outlet channels are opened at a single side such that the flow of the air from the inlet channels into the absorber sections and from the sections into the outlet channels is constrained.
