Abstract (en)
The lid of the present invention has a top plate (10), a side wall (15) and an engaging portion (20). The side wall includes a linear extension section (151) and a linear inner engaging section (152). The extension section connects the inner engaging section to the periphery of the top plate. The engaging portion includes a top engaging section (21), an outer engaging section (22) and a guiding section (23). The guiding section slantedly extends outward from the lower end of the outer engaging section. The top engaging section connects to the engaging section and the side wall. An engaging slot (24) is defined between the inner engaging section, the outer engaging section and the top engaging section. At least one engaging rim (25) extends from a portion between the outer engaging section and the guiding section. As such, the engaging lip can be restrained in the engaging slot while the lid is capped on a cup.
