Abstract (en)
[origin: EP2248983A1] The door (2) has lamellas (2a) arranged adjacent to each other in a closed position of the door. Lever elements are guided into a guide by guide sections. The lever elements are coupled with each other such that the lamellas attached to the lever elements include a larger incidence angle in a complete open position of the door and/or the lamellas are partially arranged in parallel or angles relative to each other. Distances between sections of the adjacent lever elements in the closed position of the door are larger than in the open position of the door.
