Abstract (en)

[origin: EP2249087A2] The hood (1) has air passage surfaces, and a cover (12) attached to the air passage surfaces and movable relative to the air passage surfaces. The cover is partially accommodated in a retainer and closes the air passage surfaces in a rest position. The cover releases an edge gap in an operating position. An edge of the cover is tapered such that the cover tapers along direction of the air passage surfaces. One of the passage surfaces is an air outlet surface for discharging cleaned air from the hood. The cover is made of metal and glass.
